(1) Based on closing stock price as of August 3, 2021 and Q2 2021 dividend of \$0.25. (2) as of June 30, 2021; The weighted average annualized effective yield on portfolio investments at period end is computed by dividing (a) interest income on debt investments and preferred equity investments (with a stated coupon rate) at the period end effective rate for each investment by (b) the par value of our debt investments (excluding debt investments acquired for no cost in a restructuring on non-accrual status) and the cost basis of our preferred equity investments. We exclude loans acquired for no cost in a restructuring on non-accrual status within this metric as management believes this disclosure provides a better indication of return on invested capital.
